Ansaldo STS wins 26 million USD LIRR Contract

Ansaldo STS (STS.MI), through its subsidiary Ansaldo STS USA, has received a contract from the Long Island Railroad (LIRR) for the LIRR Harold and Point CIL's (Central Instrument Location) Interlocking project. The contract value is 25.8 million USD.

This project, part of the LIRR East Side Access program, replaces the current vital relay-based interlocking control system with a MicroLok® II vital microprocessor-based system.

This switch to a microprocessor-based technology follows on the success of other upgrades ASTS USA has implemented for the LIRR using the MicroLok II platform, including the Wood, Jamaica, and Amityville and Wantagh interlockings.
